

BARCODE MANAGER

If your company processes items with barcode labels, this module is really essential.

More than 40 years ago, the first barcode was read on a pack of chewing gum in a supermarket: it was the first use of a system that is now used 5 billion times a day.

Barcodes continue to play a crucial role in improving efficiency and increasing productivity in many different sectors.

With Mago4 all you need is its Barcode Manager module and **any Barcode reader** in keyboard emulation to manage all inventory loading and unloading operations with a simple **scan**.

You simply acquire the bar codes through a specific window that contains **only the information strictly needed** in that moment, making the operation simpler and faster than ever.

Specifically, the barcode input window **adapts to the document** from which it comes. For example, in the bill of lading, by clicking on the dedicated button, you can specify the status of the item (Confirming, To return, etc.) simply by means of a function key or, even faster, by scanning the associated barcode.

Mago4 Barcode Manager can produce and recognize **different types** of barcode: from the **simple** barcode able to identify a single Item that may be differentiated also by Units of Measure, to **structured** barcodes composed by more information, such as Lots, lot expiry date, Serial Number, Quantity, Weight, Volume, etc.

The module is also capable to read GTIN (GS1-128) codes, which are widely used in the food and large-scale distribution sector.

1**ZERO ERRORS**

No more errors, thanks to the elimination of manual interventions.

2**QUICK**

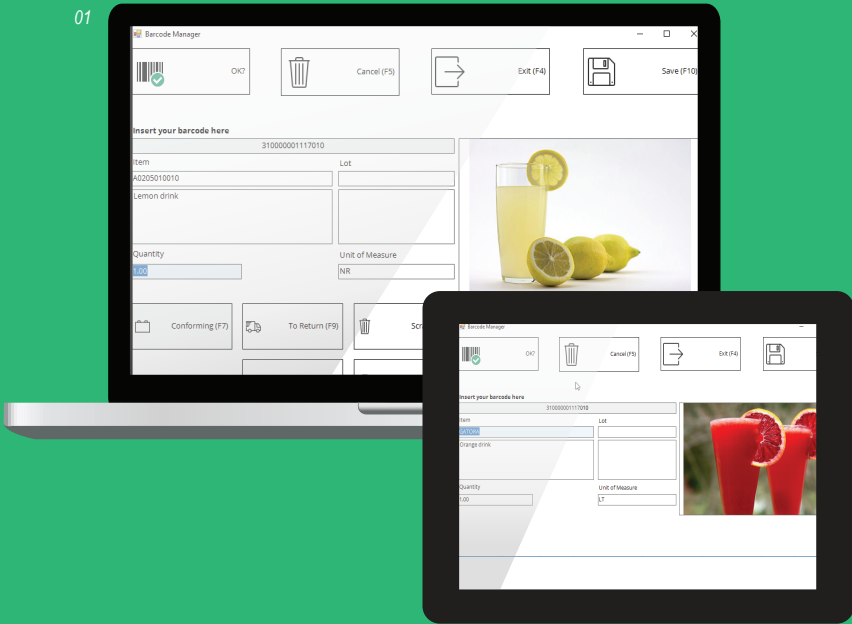

It accelerates the goods recognition process and related operations.

3**SYNTHETIC**

The dialog box shows only the useful information.

4**COMPLETE**

It works with the most common barcodes used on the market.

01. Barcode Manager Window in Bill of Lading

02. Barcode Manager Window in Delivery Note
