

WMS MOBILE

Warehouse management on the palm of your hand!

With a **Wi-Fi RFID** handheld **device** or with a simple barcode reader, you can carry out loading and unloading, stock transfer, inventory, packing and unpacking... all **synchronized in real time** with your Mago4 ERP.

With Mago4 WMS Mobile just **few beeps** are sufficient to manage all the aspects regarding the warehouse logistics: performing the receipt and putaway of the goods, entries, picking, delivery and warehouse inventory.

By shooting on the barcode of the items, lots, stocks and bins, you will obtain the desired result with extreme precision and speediness.

WMS Mobile **conveys** the data read by the handheld device to the **company database** in real time.

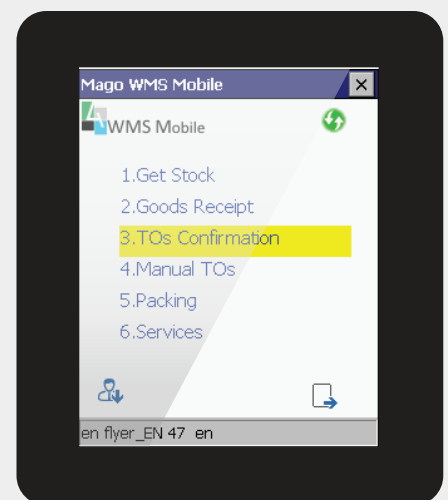

You can rest assured: the system runs also in areas **not covered** by the Wi-Fi signal thanks to the intelligent system of **data saving system** in the Terminal's internal memory. As soon as you re-enter the Wi-Fi area, or when the device is positioned back into its dock connected to a PC, the database is **updated** with the data previously saved.

The WMS Mobile module also allows you to manage the **stock putaway, packing and unpacking** operations through the handheld device: a truly irreplaceable help for carrying out, quickly and efficiently, any type of warehouse logistics operation.

With Mago4 WMS Mobile **your warehouse inventory**, however

extensive, becomes a quick and precise operation thanks to the use of a handheld device.

WMS Mobile is **compatible** with all the most common handheld devices (Psion, Datalogic, Motorola) that employ the operating systems Microsoft Windows Mobile and Microsoft Windows CE.

WMS Mobile menu with assigned Transfer Orders

1**QUICK**

Just a few beeps are required to perform all warehouse management operations.

2**EASY TO USE**

Works just like a barcode reader.

3**ALWAYS UPDATED**

The terminal is connected to the company database and constantly updates it.

4**WORKS ANYWHERE**

Even in areas with no Wi-Fi signal: the device saves the data internally to subsequently updates the database.
